

3D programming : Project Design document

Student names:

Arne Van Campenhout

Title application:

Trash Target

Pitch:

The goal for users is to: (*learn, play, experience, ..*)

The goal for users is to learn about recycling in a horror / fps style game

This we be (*impactful, educational, memorable, fun, other,..*)

This will be educational as players learn (or relearn) what kind of trash goes in which trash bin. This will also be fun as players have a gamified way to learn and can beat their own score.

Basics:

The application will take place in : (*describe your world*)

The application will take place in a scary forest.

And the user will get around the scenes with: (*describe your movement and play possibilities (how to grab, shoot, ...)*)

And the user will get around the scenes with the normal movement keys. Additionally the user will be able to interact with signs and shoot.

The user will be able to grab (*+ reason why*):

- Signs to interact with to learn about the specific trash bin
- "Killed" trash to clean up the forest

Describe you audio (*background sound, audio feedback when, 3D sound*)

There is little to no audio in the game, leading to a kind of “eerie” atmosphere. When the player fires the gun there is 3D sound from the gun being fired.

Describe what you see and what you can do with your main menu:

On the main menu the player can see the controls and an explanation of how the game works. Additionally the player can start the game.

Other features you want to describe:

Sketch (a basic sketch per scene):
